John Loesing

Dear Mr. Loesing,

I am not sure if it was you who wrote the Editorial on the question of cancer clusters in Oak Park. I want to thank the ACORN for their sane and scientific approach to this topic.

I was at a DTSC meeting tonight and I saw a distraught resident from Oak Park. As has been stated in your many articles, there is no known basis in fact that anyone's cancer is caused by the Santa Susana Field Lab in Oak Park.

One thing that your community can do is contact the EPA. They want to know if the community wants a TASC team. TASC stands for Technical Assistance for Community members.

You could contact the EPA and do a story on TASC. Ask community members to have a TASC member review all of the cancer registry data, any health studies done for the area, and the TASC team could make recommendations.

This is the TASC representative's contact info:

Luis Garcia - Bakarich
